AAC FOR NONVERBAL PEOPLE · FREE FOREVER

No one should have to pay to be *heard.*

LuminAAC is a free talking app for nonverbal children—and a bridge for the families, schools, and clinics who love them. The full app. Free. Forever.

LuminAAC

For families · schools · clinics
luminaac-web.vercel.app

My Voice for the child. The Bridge for everyone who listens. Private by default. Works offline.

FOUR PILLARS

What families, schools, and clinics ask for

01

Waterways & hand-drawn zones

Mark home and school. Draw the fence line by hand or stylus. Optionally find mapped water nearby. Alerts can help—when My Voice is open—but they **never replace adult supervision** and are not a drowning-prevention guarantee.

02

Handoff the whole circle can share

On Home, a **Handoff** card shows Last ate, Mood now, Said today, and Watch for—with **Copy for the next person**. Invite teachers and therapists. Team chat (with a free family account) stays off the child's board.

03

Learning that still feels like talking

Play gathers stories, sound games, and word games that use the child's own tiles. Optional Sound Path adds gentle voice practice. Nothing fails. The talker is never locked behind a score.

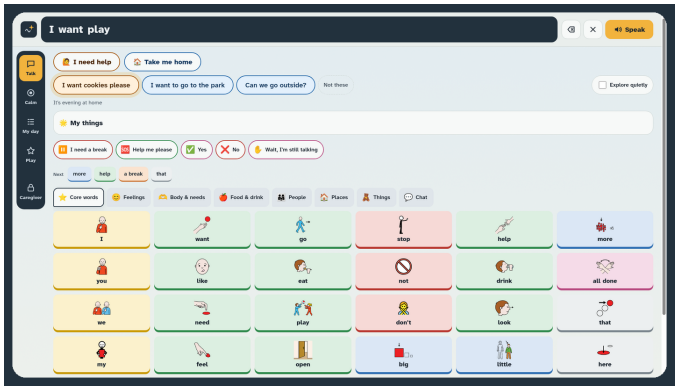

04

Potty Path — asking comes first

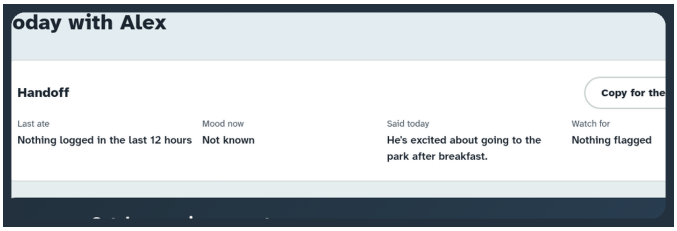

An optional, calm toilet routine (off until a parent turns it on). Asking to go counts most. Rewards only add. Supportive—not diagnostic, not coercive, not medical advice.

SEE IT

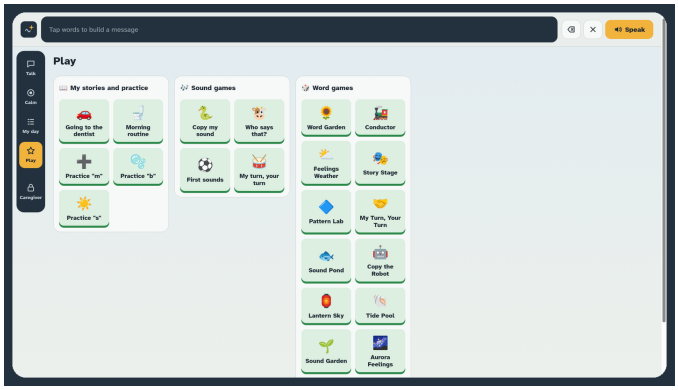

Real screens from the app

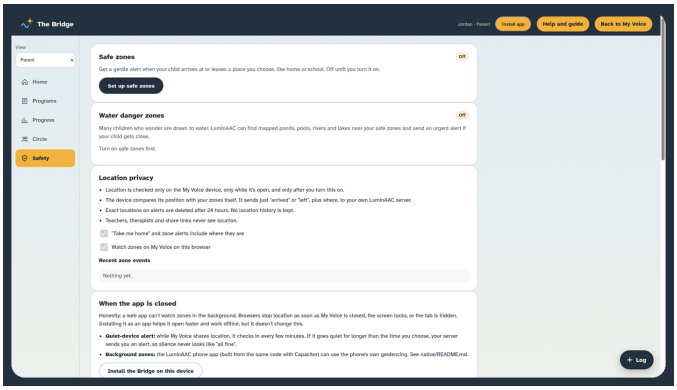

Talk — stable core words, lit Speak control. Demo child name not shown on board chrome.

Home → Handoff — copyable summary for drop-off and pick-up (demo data for Alex).

Play — stories, sound games, and word games in one place.

Safety (setup / off) — zones and water remain Off until a guardian consents. Honest “when the app is closed” limits included.

AUDIENCES

Built for three kinds of care

FAMILIES

Start on devices you already have

Free forever. Private by default. Pair a tablet and a phone. Turn on only the safety tools and programs you need. Export or delete anytime under Privacy.

SCHOOLS

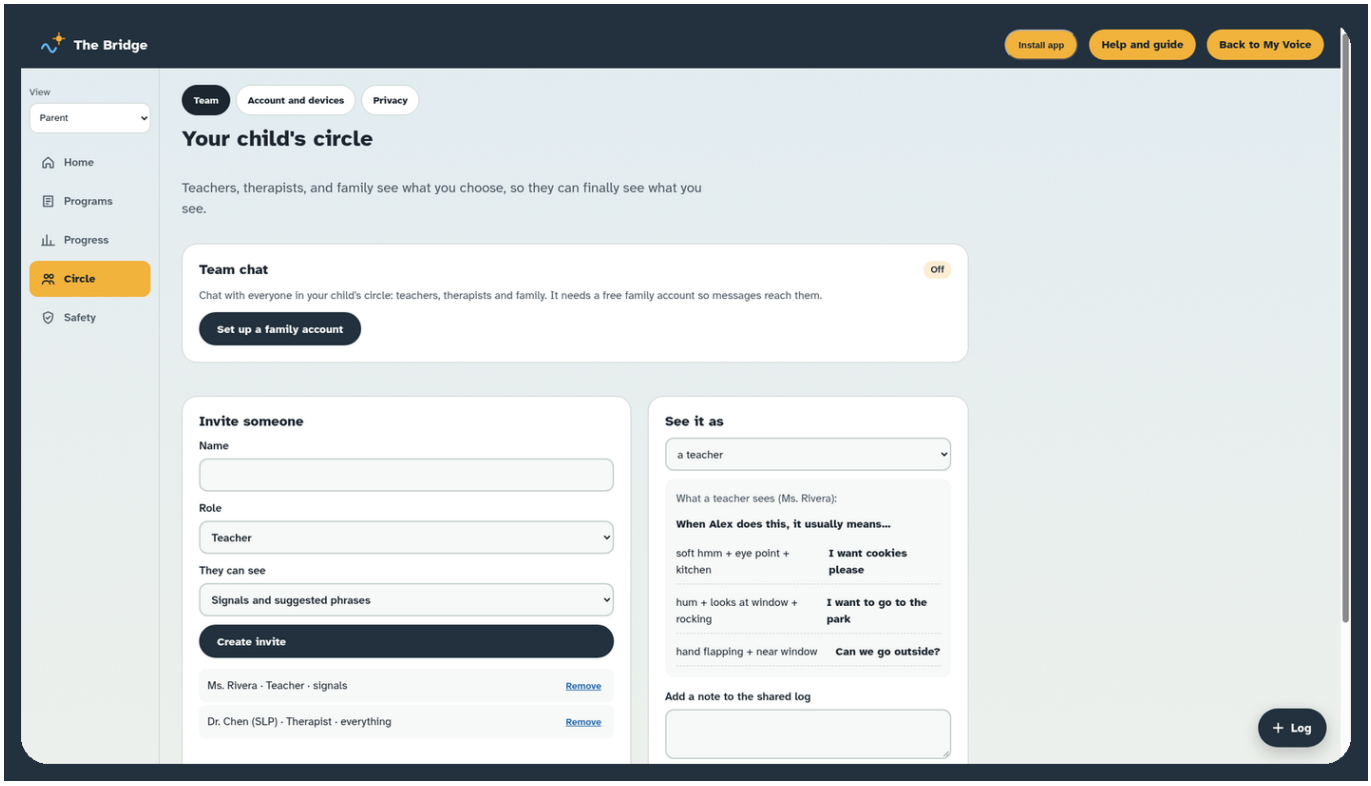

Handoffs without losing the thread

Join with an invite. Use Home Handoff + Log at the door. Team chat for calm notes when the family account is on. Same communication supports across settings.

CLINICS

Records, not diagnoses

Printable therapist summaries and optional Sound Path SLP sheets. Practice support—not a claim to replace therapy or certify clinical outcomes.

Circle → Team (preview). Invites and "See it as" teacher preview. Chat shown **Off**—account setup required for live messaging; no signup was completed for this brochure.

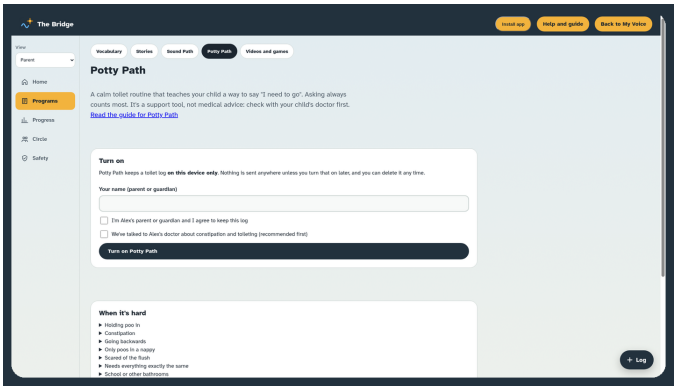

POTTY PATH

Optional. Respectful. Communication first.

Potty Path teaches a way to say “I need to go.” Parents turn it on only after guardian consent. Logs stay on the device unless you choose otherwise later. Print a school handoff sheet when you generalise to other bathrooms.

Please know

Not medical advice. Not a guarantee of continence. Check with the child’s doctor first. Tokens never punish; the talker is never the reward.

Setup / off. Consent form empty—program not enabled in this capture.

Honest limits (read aloud with families)

Geofencing supplements supervision; maps and notifications can miss events. Web location is not background GPS. Native store apps are not released yet. Team chat is not instant phone push. No HIPAA/FERPA/COPPA compliance claim is made here.

Free on the devices you already have.

Open My Voice and The Bridge in your browser. Add to home screen when you are ready. The full app for families—no trial that runs out.
